

Frequently Asked Questions

Setup, customization, Notion, Excel, and license FAQs

Frequently Asked Questions

Answers to the most common questions about setup, use, and licensing

General

Q: Can I use this on multiple computers?

Yes. The license covers one practice, not one computer. You can install and use the files on any device you own, as long as it is used within your single practice.

Q: Do I need Microsoft Office?

Microsoft Word and Excel give the best experience. However, Google Docs and Google Sheets are fully compatible — simply upload the DOCX and XLSX files to Google Drive and open them. Minor formatting differences may appear in Google Docs.

Q: Can I use Google Slides instead of PowerPoint for the deck?

Yes. Upload the PPTX file to Google Drive and open with Google Slides. The layout imports cleanly with minor font substitutions.

Q: Is this suitable for a solo bookkeeper?

Absolutely — this system was designed with solo and small practices in mind. Scale up by adding more clients to the dashboard and more databases to Notion as you grow.

Customization

Q: How do I replace the [BRACKETED TEXT]?

Open each file in Word/Google Docs and use Find & Replace (Ctrl+H / Cmd+H). Search for "[PRACTICE NAME]" and replace with your practice name. Repeat for each unique placeholder.

Q: Can I change the colors and branding?

Yes. The DOCX and PPTX files are fully editable. Change fonts, colors, and logos to match your brand. The Excel file uses a consistent color scheme that you can also modify.

Q: Can I add my logo to the templates?

Yes. Open any DOCX file in Word, go to the header area, and insert your logo image. Resize to fit the header space provided.

Q: Can I delete sections I do not need?

Yes. Remove any sections that do not apply to your practice. The templates are designed to be modular.

Notion

Q: Do I need a paid Notion plan?

No. The free Notion plan supports all 7 databases and all features used in this system. A paid plan is only needed if you want to invite clients to a shared Notion workspace.

Q: How do I connect the Notion databases together?

After importing all CSVs, open the Clients database. Add a Relation property pointing to Monthly Close, then to Tasks, Invoices, and Document Requests. This links all records to their client. See the Notion Setup Guide for step-by-step screenshots.

Q: Can I use Airtable instead of Notion?

Yes. All 7 CSV files import cleanly into Airtable. The structure and relationships work identically. Set up linked record fields instead of Notion Relations.

Excel / Dashboard

Q: The KPI Dashboard shows zeros — what is wrong?

The Dashboard sheet pulls data from Client CRM, Lead Pipeline, and Invoice Tracker. Add at least one entry to each sheet and the KPIs will populate automatically. Yellow cells are data-entry cells; white cells with formulas should not be edited.

Q: Can I add more clients than the template shows?

Yes. Each sheet is designed to expand. Simply add rows below the last entry — formulas in the summary rows will extend automatically in most cases. The Dashboard will update.

Q: Can I use this in Google Sheets instead of Excel?

Yes — upload to Google Drive and open with Google Sheets. Most formulas are compatible. Conditional formatting and some chart types may require minor adjustments after import.

Q: The Pricing Calculator is not working.

Ensure macros/iterative calculations are enabled if prompted. The calculator uses standard Excel formulas only — no VBA. If values do not update, press Ctrl+Alt+F9 to force a full recalculation.

License & Support

Q: Can I share this with a colleague or employee?

Within your own practice, yes — your staff can use these files as part of your operations. You may not share the original files externally or give them to colleagues at other firms.

Q: I bought this for my bookkeeping course — can my students use it?

No. This license covers one practice. Educational or course use requires a separate educational license — contact the seller via Etsy for pricing.

Q: How do I get support?

Contact the seller through the Etsy messaging system. See 01-Quick-Reference/Support-Guide.pdf for response times and what information to include.

Q: Will there be future updates?

Yes. Version updates are released periodically. Check your Etsy purchase history for update notifications. Major updates may be offered at a discount to existing buyers.
