

Notion Workspace Setup Guide — Recruiting Agency OS

OVERVIEW

Your Notion workspace connects all aspects of your recruiting agency — from BD pipeline to candidate management and placements. This guide walks you through setting it up in under 2 hours.

DATABASE OVERVIEW

8 databases are included in your CSV import files:

DATABASE STRUCTURE

- Candidates_Database.csv — Full candidate tracking with stage, score, and client match
- Clients_Database.csv — Client accounts, active roles, and placement history
- Job_Orders_Database.csv — Active searches with priority, status, and timeline
- Placements_Database.csv — Completed placements with guarantee tracking
- Tasks_Database.csv — Daily task management linked to searches and clients
- Business_Development_Database.csv — BD pipeline with stage and follow-up tracking
- Content_Calendar_Database.csv — LinkedIn and marketing content planning
- SOP_Library.csv — All agency SOPs with version control

IMPORT STEPS

1. Open Notion and create a new page titled 'Recruiting Agency OS'
2. Click the '+' button → 'Import' → 'CSV'
3. Upload Candidates_Database.csv — rename to 'Candidates'
4. Repeat for all 8 CSV files
5. Open NOTION_WORKSPACE_SETUP.md for advanced setup (relations, formulas, views)

RECOMMENDED VIEWS TO CREATE

- Candidates: Board view grouped by Stage
- Job Orders: Board view grouped by Status; Calendar view by Start Date
- Tasks: Board view grouped by Priority; Calendar view by Due Date
- BD Pipeline: Board view grouped by Stage
- Content Calendar: Calendar view by Publish Date

WEEKLY WORKFLOW IN NOTION

Monday: Review Tasks for the week; check BD pipeline for follow-ups due

Daily: Log all candidate and client communications as tasks

Friday: Update all Job Order statuses; send weekly client updates

Monthly: Review Placements database for guarantee expiration alerts
