

Etsy Seller AI SEO Listing System

The complete guide to getting found on Etsy with optimized listings

How Etsy Search Works

- Etsy ranks listings on two factors: query matching (relevance) and listing quality score
- Query matching: title, tags, categories, and attributes vs buyer search query
- Listing quality score: click-through rate x conversion rate -- the metric that matters most
- Recency bonus: new and renewed listings get a temporary search boost
- Customer experience score: shop reviews, complete About section, and policies

The SEO Hierarchy

- TITLE (140 chars): Most important -- primary keyword must appear FIRST
- TAGS (13 tags, 20 chars each): Second most important -- use all 13 every time
- CATEGORIES and ATTRIBUTES: Fill in every field -- Etsy treats these as additional tags
- DESCRIPTION (first 160 chars): Include keyword in sentence 1 -- this is your search snippet
- PHOTOS: Not ranking factors but drive CTR which improves listing quality score

Keyword Research System

- Source 1: Etsy autocomplete -- type keyword, screenshot every suggestion (DO NOT press enter)
- Source 2: eRank or EverBee -- monthly search volume data for any Etsy keyword
- Source 3: Competitor listings -- analyze top 5 results for common phrases
- Source 4: Pinterest autocomplete -- buyer-intent language for lifestyle products
- Source 5: Google Trends -- identify seasonal patterns, update 4-6 weeks before peak

Title Best Practices

- First 40 characters: put your PRIMARY keyword here -- this is the highest-weight section
- Use all 140 characters -- every unused character is potential visibility left behind
- Separate keyword phrases with commas or pipes for readability
- Include: what it IS + who it's FOR + when/why they buy it (occasion)
- Bad: 'handcrafted ceramic vessel' | Good: 'Ceramic Vase Floral, Painted Vase Gift, Farmhouse Vase'

Tag Strategy

- Use ALL 13 tags every single time -- unused tags = missed opportunities
- Tags should be PHRASES (2-4 words), not single words
- Framework: 3 core product tags + 2 style tags + 2 audience tags + 2 occasion tags + 2 long-tail + 2 related
- Tags should reinforce title keywords with variations -- not repeat the exact same phrase
- Update seasonal tags quarterly -- 4-6 weeks before each peak season

AI Prompt Library

- 6 ready-to-use AI prompts included for ChatGPT, Claude, and Gemini
- Complete Listing Generator: title + 13 tags + full description in one prompt
- Title Optimizer: 3 title variations with character counts
- Tag Generator: 13 tags with size validation and search volume rating
- Description Rewriter: structured rewrite with headers, bullets, and FAQ
- Seasonal Optimizer: adapt any listing for upcoming holidays
