

Product Roadmap

The OQUL EdTech OS roadmap — what's built, what's coming, and the long-term vision for the platform.

Vision: The Operating System for Education

OQUL aims to be the foundational infrastructure layer for AI-powered education — as essential to EdTech businesses as AWS is to cloud businesses. Every student deserves a personalized, adaptive learning experience powered by AI.

Current State — v1.0 (Phase 55)

Shipped

- ✓ AI tutor (Leila) with Darija support
- ✓ Adaptive learning engine
- ✓ Full K–12 curriculum (12 grade levels)
- ✓ Official exam alignment
- ✓ Parent monitoring portal
- ✓ Gamification (XP, badges, streaks)
- ✓ Daily challenges
- ✓ Knowledge tracing
- ✓ Email verification
- ✓ Production observability stack

Platform Stats

Grade Levels	12
Source Files	461
API Endpoints	50+
DB Migrations	17
Seed Scripts	50+
Load Test Suites	5
Build Phases	55

Phase 56 — Content Factory

Q2 2026

Planned

Content Generation

Automated AI content generation pipeline to scale curriculum coverage beyond the current hand-crafted lessons. Full specification available in docs/phase-58-content-factory/.

- AI-powered lesson generator with quality gates
- 2BAC Mathematics full content automation
- Batch content generation with human review workflow

- Content versioning and rollback capabilities
- Pilot batch: 50 lessons per subject, validated by educators

Phase 57 — Multi-Language Expansion

Q3 2026

Planned

Internationalization

- Full internationalization (i18n) framework implementation
- French-first curriculum variant for Francophone Africa
- English curriculum module for international schools
- Leila persona localization (name, dialect, cultural context)
- Right-to-left (RTL) layout refinements for Arabic

Phase 58 — B2B School Licensing

Q4 2026

Planned

Enterprise

- School/institution licensing module
- Bulk student enrollment via CSV/API
- School administrator dashboard
- Teacher performance analytics
- Classroom management interface
- API for integration with existing school ERP systems
- White-label SDK for school-branded apps

Long-Term Vision (2027+)

A

AI Tutor Marketplace

Allow educators to create and sell custom AI tutor personas and curriculum packs within the OQUL ecosystem.

B

Mobile Applications

Native iOS and Android apps with offline lesson access, push notification reminders, and mobile-optimized adaptive experiences.

C

Regional Expansion API

Open API for third-party curriculum providers to plug their content into the OQUL adaptive learning engine.

OQUL Cloud

Managed hosting option — deploy OQUL with zero infrastructure management. Focus on content and business, not servers.

Stay Updated

Major releases are delivered as new product versions. This roadmap reflects the development direction as of v1.0 release. Priorities may shift based on community needs and market feedback.
