

Frequently Asked Questions

Setup, customisation, Notion, Excel, and licensing — 16 answers

Frequently Asked Questions

16 answered questions on setup, customisation, Notion, Excel, and licensing.

01 / 05 GENERAL SETUP

Can I use this product on multiple computers?

Yes. The licence covers one practice, not one device. Install and use the files on any device within your single practice.

Do I need Microsoft Office?

Word and Excel provide the best experience. Google Docs and Google Sheets are fully compatible — upload DOCX and XLSX files to Google Drive and open from there. Minor formatting variations may appear in Google Docs.

Can I use Google Slides for the proposal deck?

Yes. Upload the PPTX to Google Drive and open with Google Slides. Layouts import cleanly; minor font substitutions may occur.

Is this suitable for a solo bookkeeper?

Yes — designed specifically with solo and small practices in mind. Add clients as you grow; the Dashboard and Notion workspace scale without restructuring.

02 / 05 CUSTOMISATION

How do I replace the [BRACKETED PLACEHOLDERS]?

Open each file in Word or Google Docs and use Find & Replace (Ctrl+H / Cmd+H). Search for "[PRACTICE NAME]" and type your practice name. Repeat for each unique placeholder. A list of all placeholders per file is in the Installation Guide.

Can I change the colours and branding to match my practice?

Yes. All DOCX and PPTX files are fully editable. Change fonts, colours, and insert your logo. The Excel file uses a consistent palette that you can also modify.

How do I add my logo?

Open any DOCX in Word, click into the header area, and insert your logo image via Insert → Picture. Resize to fit the designated space. Repeat for each document.

Can I delete sections that do not apply to my practice?

Yes. All templates are modular. Delete any section, clause, or row that does not apply. No formulas or other sections depend on deleted content.

03 / 05 NOTION WORKSPACE

Do I need a paid Notion plan?

No. The free Notion plan fully supports all 7 databases and all features used. A paid plan is only needed if you want to invite external clients to a shared workspace.

How do I connect the 7 databases together?

After importing all CSVs, open Monthly Close, add a Relation property, and link it to the Clients database. Repeat for Invoices, Tasks, Document-Requests, and Client-Portal. See [Notion-Setup-Guide.pdf](#) for step-by-step instructions with screenshots.

Can I use Airtable instead of Notion?

Yes. All 7 CSV files import cleanly into Airtable. Create Linked Record fields (instead of Notion Relations) to connect each database to the Clients table. All columns and data transfer directly.

04 / 05 EXCEL DASHBOARD

The KPI Dashboard is showing zeros — what is wrong?

The Dashboard pulls from Client CRM, Lead Pipeline, and Invoice Tracker. Add at least one client with Status = "Active" to Client CRM, and the KPIs will populate. Yellow cells are data-entry; white cells are formulas — do not edit white cells.

Can I add more clients than the sample rows?

Yes. Add rows below the last entry in any sheet. Formulas in summary rows extend automatically. The Dashboard will update.

Can I use this in Google Sheets instead of Excel?

Yes — upload to Google Drive and open with Sheets. Standard formulas transfer. Conditional formatting and some chart types may require minor adjustments after import.

The Pricing Calculator is not updating — how do I fix it?

Ensure macros are enabled if prompted. The calculator uses standard Excel formulas only (no VBA). If values do not update, press Ctrl+Alt+F9 for a full recalculation.

05 / 05 LICENSING

Can I share this with my staff or a subcontractor?

Yes, within your own practice. Your employees and subcontractors working for your practice can use these files. You may not share the original download files with people at other firms.

Can I use this for a bookkeeping course I am teaching?

No. This licence covers one bookkeeping practice. Educational or course use requires a separate licence — contact the seller via Etsy for pricing.

How do I get support?

Contact the seller through the Etsy messaging system. See Support-Guide.pdf in 01-Quick-Reference for response times and what information to include.
